

October_1_Open_Notebook_3

Class Notes:

- Serendipity (unplanned fortunate discovery): things have to come together at the right time and in the right circumstances.
 - Kim Martin (Guelph): discusses the role of serendipity in research.
 - Digital research environments can encourage serendipitous discoveries by making unexpected information and connections easier to encounter.
 - Digital history is more interesting when serendipity is built into the research process from the beginning, rather than treating unexpected discoveries as accidental side effects.
 - Research must foster exploration and lead to the unexpected.
- Good research does not always follow a perfectly planned path. Researchers should leave room for exploration, unexpected outcomes/connections, and discoveries.
- Digital infrastructure can help researchers connect information, people, sources, and ideas that might otherwise remain separate.
- Surfacing: bringing information to a researcher's attention that they might not have actually searched for.
 - The goal is to make discoveries even if it is not what you were originally looking for.
 - Digital tools should help researchers encounter the unexpected.
- Digital Preservation
 - Digital projects raise important questions about how digital materials are stored and maintained over time.
 - For example, images can be uploaded to a website, but the website and access to the website ultimately depend on people to keep it updated and running.
 - So, how do we navigate digital preservation? Who pays to preserve old databases and websites?
- Researchers need to document their experiences so they can:
 - Understand what they did
 - Reproduce their process
 - Identify mistakes
 - Explain how they reached their conclusions
- Basically: Experiment freely, but document carefully.

		Data	
		Same	Different
Analysis	Same	Reproducible	Replicable
	Different	Robust	Generalisable

- "Spot the bullshit"
 - Developing the ability to recognize when someone is skating over important details in their research or argument.
 - Researchers should pay attention to:
 - Missing methodological details
 - Claims that are not adequately supported
 - Conclusions that go beyond evidence
 - Processes that are presented as simpler than they actually are

Command Line Murders:

- Output of one tool becomes the input of another
- Path:

```

Last login: Tue Sep 15 13:00:11 on console
alex_1@dhcp-87-138 clmystery-master 2 % 

```

- Power shell ↑
- Mac = Ls (as a command)
- Cat = can cake make the contents of the following file into the output of this window?

- To open the first hint:

Try poking around what's in a file by using the 'head' command:

```
head -n 20 people
```

This will show you the first 20 lines of the 'people' file.

- Type `cd mystery` to begin, then the hint command (`head -20 people`)

```
Don't use a text editor to view any files except these instructions, the cheatsheet, and hints.
[alex_1@dhcp-87-138 clmystery-master 2 % cd mystery
[alex_1@dhcp-87-138 mystery % la
zsh: command not found: la
[alex_1@dhcp-87-138 mystery % ls
crimescene      interviews      memberships    people          streets         vehicles
[alex_1@dhcp-87-138 mystery % head -n20 people
*****
To go to the street someone lives on, use the file
for that street name in the 'streets' subdirectory.
To knock on their door and investigate, read the line number
they live on from the file.  If a line looks like gibberish, you're at the wrong house.
*****
```

- Now we are in the "streets" directory
- Note: make sure you spell things right lol

- If gibberish shows up, we're "at the wrong house"

```
moped embarrassed jeeps entitle s quality
paperwork bureaux lustfully
agonies foremost seeks bulletined disputation glop weaponless
leans appointing mistrusted twit
diagonal gossips bequeaths launderer
shlemiel okra agog hurdling indefensibly invalidation
burlesques distressful tossups
integral embodiment proposer
mastodon sublime resetting telegrapher fulling sleepers
anything brashest aged barbershops queenly beaten
destroyer honorarium bald stone emerging sowed invaliding
whine warms lambastes bleak wobblier enjoin meats
extortionists mangrove responses portrayed newsboy
ultra sermon safeguarding poinsettia blogging
hairstyle glided anorexia paydays towers evenly sedatives
regret thorax reverse undergo tangy emoting boomed
debenture gunrunners daydreamers quit legitimized insensible
immovable shortly miniature guys sensations teals
pushed ententes finished frankness rustiness neutralizers
unquotes bibles pasha venerated impel teabag
witless flow sulfured liberal theists
gravitates amebas fast boarder landmass bouillabaisses
kowtowed unshaven draftiest meshing
overheat repatriate lathed duskiest spiral babel shooters
dawdlers villain assiduous restively
equestriennes awful bellwethers headroom repayments
frat loudmouthed probably trundle
taring blisters remarriages budget impediments bossy illegibly
interpret roasted stirrer tombing hoagy worshipping
modelled reining indorsing gimlets eeriest dignitaries
```

- However, the street names in the sub directory are not matching the street names that match the suspect list (ex., Alicia Fuentes, F, 48 Walton Street)
- So... I need to figure out how to command the street # from the suspect list to find what address they're at
- Other special commands:
 - pwd (shows where you are in a path)

```
[alex_1@dhcp-87-138 streets % pwd
/Users/alex_1/Desktop/clmystery-master 2/mystery/streets
alex_1@dhcp-87-138 streets % █
```

- mkdir (make directory) - makes a new empty folder (not used in command murders, though)

Collection of Darwin Letters:

- Csplit command: open up the text file, look for the pattern "charles darwin 2," and write every time you find it in a new file, and give it a new file name (Darwin 00, Darwin 002, Darwin 002...)
- Csplit has a loop built in to recognize patterns.
 - `csplit -f darwin -n 3 pg2087.txt '/CHARLES DARWIN TO/' '{212}'`

```

- Letters in the download folder
- Be as thorough as possible so it can be reproduced- even if only by you.
- Digital history can be lost so easily if not "kept up" - think properly archiving an old book, but online.
